

Astraiv Design Reviews

1.

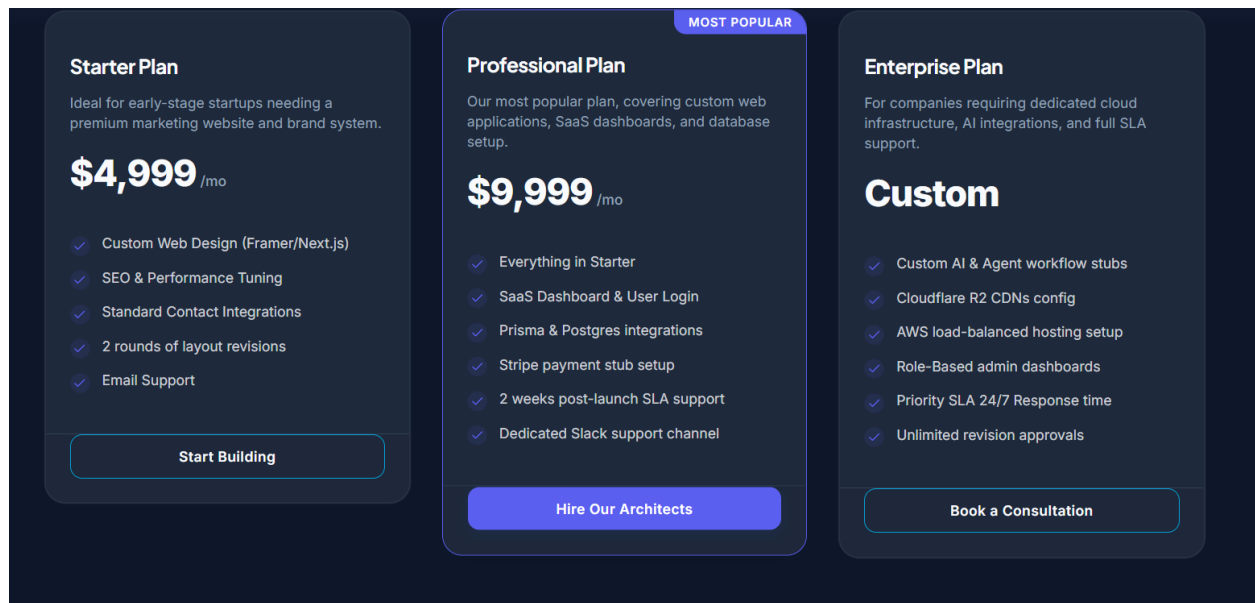

Appears this section before our service. And I suggest remove the subtext and make it like this (below)

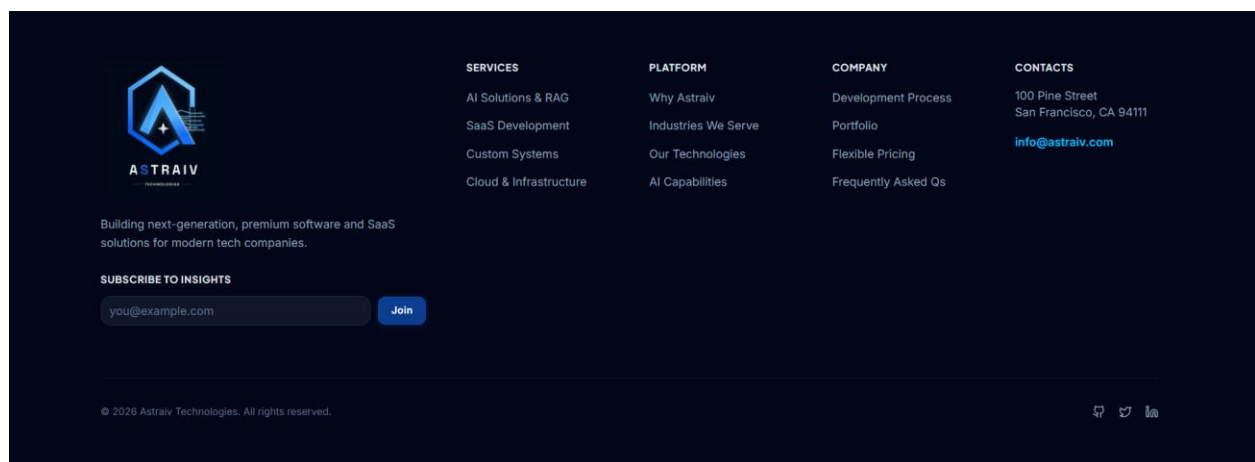

Make the section highlighted cause its important. People can notice this.

2.

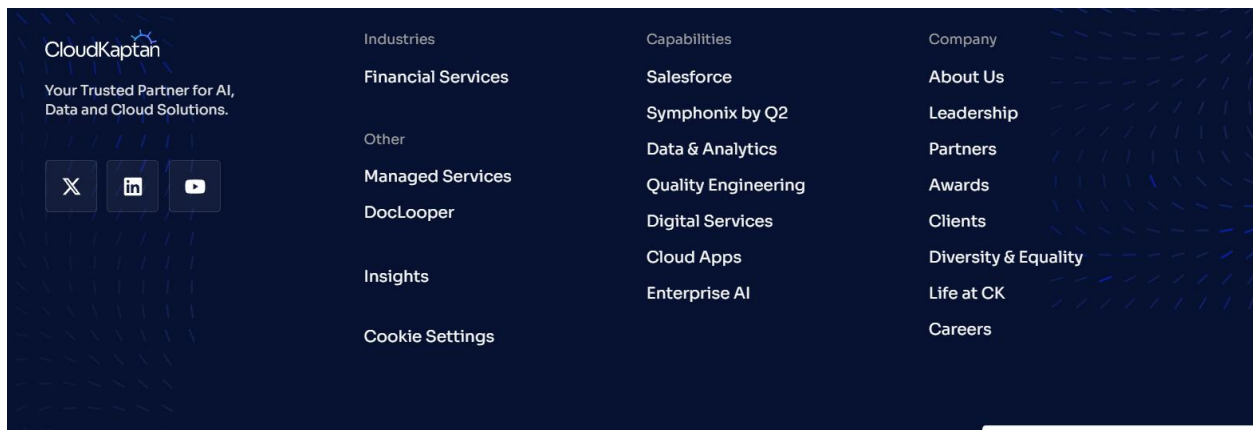

The left one is not equal in height like th others. Add some extra features so the container automatically increase the height.

3.

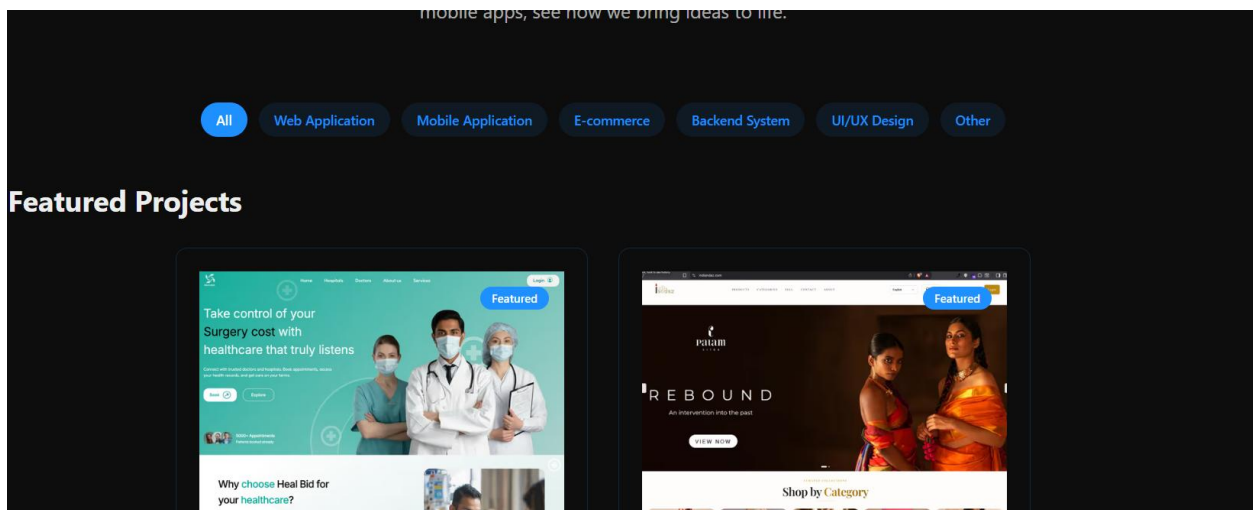

Its not aligned properly.. make each of the element's alignment equal. Like (below)

4. case studies

Make the case study section like this

Each and every case studies have their separate section so it helps our client to find cases . (check prilix labs)

5. Hover effect (try this)

“Implement a Google Antigravity-style mouse interaction.- Use spring-based interpolation instead of directly mapping the cursor position.- Smooth follow amount: 0.1.- Spring stiffness: 150.- Spring damping: 22.- Maximum parallax movement: 30px.- Hover enter: 450ms cubic-bezier(0.22,1,0.36,1).- Hover leave: 550ms ease-in-out.- Particles should continue moving slightly after the cursor stops and then settle naturally.- Avoid abrupt position changes or instant color transitions.”
